DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-26 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

On page 55, line 23 - page 56, line 1, the specification states that it is possible to realize the respective portions and stages by software structures. A software structure may be a program. Programs are functional descriptive material, which require a computer-readable medium to realize the program's functionality. Since the claims do not include limitations for the computer readable medium necessary to realize the software's functionality, claims are nonstatutory (See MPEP 2106).

Further, the claims define a mathematical algorithm. For a claim containing limitations for a mathematical algorithm to be statutory, the claim must recite some practical application such as a physical transformation or providing a result that is concrete, useful and tangible. Claims 1-26 are directed to a jitter measuring apparatus and method that determine a jitter amount of a signal; however, no useful, concrete and tangible result is provided. Claims 1-26 lack any recitation of a practical application and are nonstatutory for this reason also.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yamaguchi et al. (US Patent No. 6,460,001) teach measuring peak jitter.

Soma et al. (US Patent No. 6,795,496) teach a jitter measuring device.
